INTRODUCTION

The Ministry of Education is committed to working with school boards to provide the best possible learning environment for our students. A large part of this commitment is ensuring that our students arrive at school safe and ready to learn. Transportation of students requires careful and responsible planning at the school board level. No two boards are identical in terms of how they deliver this important service, which means that funding provided to school boards must reflect the diversity of challenges boards face as they work to offer effective and efficient service to their students.

This paper will outline details of a new funding model for student transportation in Ontario. It is intended to initiate a discussion around the details of the new model that will be introduced this year, to ensure that stakeholders have opportunities to provide input as we move toward full implementation of a new way of funding.

The government's intention is to test this model with school boards in 2004-05, while allowing for a full consultation during that time on each component. Details have been shared with school boards, primarily through the Transportation Review Committee, and the consultation process has begun. The ministry's intention is to refine the funding model in 2005-06, taking into account advice obtained through these consultations.

BACKGROUND

The Transportation Grant provides school boards with funding primarily to meet the costs of transporting students from home to school, including students with special needs.

During the 1998-99 school year, a new education funding model was introduced. At that time, a decision was made to hold funding for transportation steady on an interim basis while the ministry worked to develop and implement a new funding approach. The interim funding was based on a per pupil amount, set at 1998 expenditure levels and adjusted each year since to reflect changes in enrolment. Funding enhancements were also provided since that time totalling about \$70 million, which were largely intended to offset cost increases that were absorbed by school boards and bus operators.

The Transportation Review Committee (TRC) was established to advise the ministry on the way in which student transportation funding should be allocated. This Committee is comprised of Ministry of Education staff, school board officials, school bus operators, and representatives from the Ministry of Transportation, Ministry of Municipal Affairs and Housing, the Ontario Parent Council, and the Minister's Advisory Committee on Special Education. The

structure of the new funding model, announced in June 2003, was developed with input from the Transportation Review Committee.

Since the freeze in allocations at 1998-99 levels, as well as during the development of this new model, the ministry has consistently heard that: transportation funding allocations were not equitable among school boards; local circumstances were not taken into account to reflect the diversity of transportation needs among Ontario's school boards; and the allocations did not reflect factors that impacted a board's ability to provide transportation to its students, but that were beyond its control.

The work detailed in this paper begins to address these issues and proposes a plan to move forward by commencing the implementation of a new funding model for transportation.

MOVING FORWARD

A new formula has been developed to recognize the different needs boards face in providing transportation services to their students. This new model also recognizes factors beyond the control of school boards that affect their ability to provide this service. As well, the model addresses the cost of providing special needs transportation services.

Objectives supporting the development of a new approach to funding student transportation in Ontario:

- *Provide sufficient funds to ensure reasonable service*
- *Allocate funding equitably*
- *Recognize differences in need, and address factors beyond the control of boards*
- *Encourage school boards to work together to achieve efficiencies*

The introduction of this model will begin in 2004-05. This is intended as a starting point in the transition to new funding levels. Over the next several months the Ministry of Education will consult with the Transportation Review Committee and other education partners to ensure that factors that impact student transportation are reflected in the new model and that adjustment parameters are reasonable and fair. Recommendations developed through this consultation process will be considered for implementation in the grants for 2005-06 and beyond.

If the consultation process does result in changes to any of the funding parameters being implemented effective 2005-06 (or subsequent years), projections outlined in this paper will be misleading. Boards may wish to defer making any major decisions which may significantly impact their expenditures on student transportation until the results of that consultation are made available.

Funding for 2004-05

The government is committed to stability in the education sector. To provide for a responsible introduction of this new funding approach, and to ensure stability in the system, board allocations under the new funding model will be phased-in.

Funding for student transportation will not be reduced for boards if the application of the new formula results in an allocation which was less than the amount received in 2003-04. Similarly, in recognition that additional consultation is required before funding parameters are finalized, percentage increases will be capped for boards projected to receive increases in funding under the new model, as illustrated in the table below.

As announced by the Minister, benchmarks used to calculate various components in the Education Funding Model have been increased to keep up with recent cost increases. As a result, all boards will receive a 2% increase in funding for student transportation in 2004-05 in addition to the amounts they are entitled to receive as a result of phasing in the new model. It is estimated that the Student Transportation Grant will total \$684.7 M in 2004-05, which represents an increase of \$33.5 M or 5.1% over 2003-04 funding levels.

Comparison of Application of New Model with 2003-04 Allocation	Phase In Allocation	Benchmark Adjustment	Total Change in Funding for Student Transportation
Increase of greater than 30%	10.0 %	2.0%	12.0%
Increase of greater than 15% and less than or equal to 30%	5.0%	2.0%	7.0%
Increase of greater than 2.5% and less than or equal to 15%	2.5%	2.0%	4.5%
Increase of less than or equal to 2.5% (i.e. x%)	x%	2.0%	x+2%
Decrease	0.0%	2.0%	2.0%

During the consultation period, the ministry will seek advice on this phase-in strategy, and consider refinements for 2005-06 and beyond.

Principles guiding the development of a new model

School boards should be responsible for:

- *All decisions related to the provision of student transportation; and*
- *Ensuring that safe transportation services are provided efficiently and effectively.*

The Ministry of Education should be responsible for:

- *Providing adequate resources to enable school boards to address student transportation needs in their jurisdictions; and*
- *Providing school boards with appropriate flexibility to enable them to do so efficiently and effectively; and*
- *Monitoring board activities to ensure appropriate accountability for taxpayers' dollars; and*
- *Making available to boards easy methods of sharing best practices and information, and encouraging partnering.*

ADDRESSING LOCAL CIRCUMSTANCES

Underlying the development of the funding model was the desire to ensure that:

- Coterminous boards are treated in the same way with respect to common local circumstances; and
- Different local circumstances are reflected for boards serving different parts of the province.

In addressing local circumstances, it was also recognized that school board boundaries do not overlap perfectly.

For example, the jurisdiction of Dufferin-Peel Catholic District School Board covers two English public boards, the Peel District School Board (in Peel Region) and Upper Grand District School Board (in Dufferin County). Therefore, it has the potential to be involved in two transportation partnerships. The jurisdiction served by many French language boards covers territory served by a number of English boards. CSD Centre Sud-Ouest, for example, provides transportation services in 13 different sites.

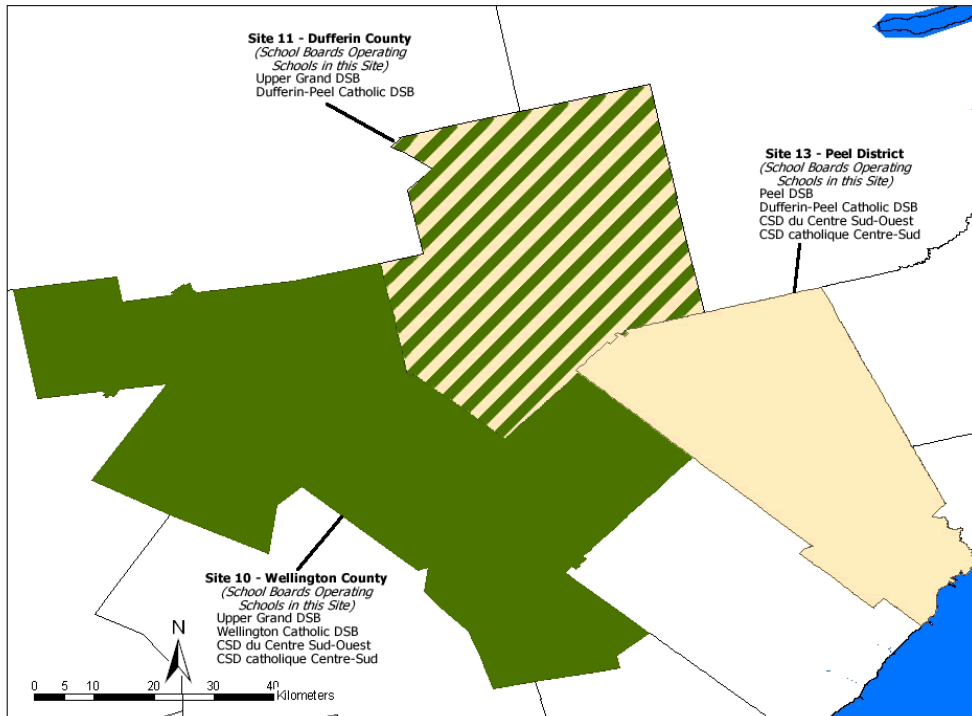

To take this into account in the design of the new model, the province was divided into sites, illustrating the areas where boards overlap. There are 35 sites and each has a unique combination of four overlapping school boards (English Public, English Catholic, French Public, and French Catholic).

In the analysis undertaken the portion of a board contained within a site has been referred to as a “board site”. In total 138 board sites with operating schools have been identified.

An illustration is provided below.

Transportation Sites in Wellington County, Dufferin County and Peel District

A NEED-BASED MODEL

Under the new model, a board’s transportation grant is calculated using the following basic formula that was announced in June 2003:

$$\text{Funding} = (\text{Need} \times \text{Cost}) + \text{Adjustments}$$

Separate formulae have been developed for eleven separate components to appropriately recognize the differences in needs faced by individual boards across the province.

FUNDING MODEL COMPONENTS

FUNDING MODEL COMPONENTS	
1. General Transportation	7. Board and Lodging
2. Mobility Accessible Transportation	8. Safety Programs
3. Special Education Transportation	9. Local Hazards
4. Other Special Transportation Needs	10. Local Priorities
5. Transportation to Provincial Schools	11. Administration
6. Unique Transportation Services	

1. GENERAL TRANSPORTATION

General transportation services are necessary because of the distance students live from their schools. For the most part, students making use of these services can ride a regular bus and walk to a group stop. Home-to-school distance of all students has therefore been adopted as a measure to assess differences in general transportation need.

Home-to-School Distance

Home-to-school distance (the shortest distance by road from a student's home to the school he or she attended in 2002-03) was measured for each student by school boards using digital maps and GIS-based student transportation management software. These calculations included students living outside the boundaries of the board's jurisdiction.

The data submitted by boards was reviewed carefully by Ministry staff for reasonableness. Follow-up actions were taken with board staff when there were data issues and discrepancies. Records with home-to-school distance of over 100 km were normalized to board averages. As well, distance calculations were normalized to the student counts as reported in financial statements. Ministry staff are satisfied that home-to-school distances used in this analysis reasonably reflect the magnitude of the challenge boards face in providing transportation.

Data for each school within a board site¹ was aggregated, and grouped into distance ranges to facilitate analysis. "Student kilometres" were weighted at

¹ The province was divided into sites, illustrating the areas where boards overlap. There are 35 sites and each has a unique combination of four overlapping school boards (English Public, English Catholic, French Public, and French

each distance range, to take into account the fact that many students can and do walk to school and therefore do not require transportation services; and the fact that the logistics in providing transportation become more difficult the further the students live from their schools. The data collection process is detailed in Appendix A.

A summary of the weighting factors applied to the aggregate student kilometres for each board site is provided in the following table.

Weighting Factors Applied to Aggregate Student Kilometres

Distance from School	Elementary	Secondary
Less than 1 km	0.25	0.10
Between 1 km and 3 km	0.75	0.25
Between 3 km and 5 km	1.00	1.00
Between 5 km and 10 km	1.33	1.33
Between 10 km and 20 km	1.67	1.67
More than 20 km	2.00	2.00

The appropriateness of these weighting factors will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes to these weighting factors may be made for purposes of calculating transportation grants in 2005-06.

Appendix B summarizes the distribution of elementary and secondary enrolment and aggregate home-to-school distances for each board site, as reported by each board, normalized and as validated by Ministry staff. In addition, Appendix B also illustrates how the number of weighted student kilometres was calculated for each board site based on the weighting factors shown above.

Additional Adjustments

Although boards may have similar - or possibly identical - student kilometre figures, that should not automatically translate into identical funding, as each board faces different conditions that are beyond its control in providing transportation services. These factors reflect differences in the location of a board’s students and schools; differences in road networks; and climatic differences. The following factors were incorporated into the funding model:

Catholic). In the analysis undertaken the portion of a board contained within a site has been referred to as a “board site”. In total 138 board sites with operating schools have been identified.

- Differences in student dispersion (i.e. where students live relative to a board's schools)
- Differences in student concentration (i.e. where students live relative to each other)
- Differences in proximity of other schools
- Differences in traffic conditions
- Differences in terrain
- Differences in dead-end road distance
- Differences in snowfall
- Differences in temperature

During the consultation process to be conducted over the next several months, this list will be examined to determine if any of these factors should be excluded from the calculation of grants for student transportation in 2005-06, and if so, why. It is also possible that the consultation process will identify other factors which also should be considered in determining grants for student transportation beginning next year.

In addition, through this consultation process, the assumptions made in determining specific adjustments for each of these factors will be examined. Adjustments applied in the calculation of transportation grants will take into account the advice obtained through that process.

Student Dispersion

Everything else being equal, the challenges in providing transportation services will be greater for boards with a widely dispersed student body. Buses must travel further distances between students resulting in longer runs and/or lower loading factors.

The Standard Distance Deviation (SDD) is a commonly used geographic factor used to measure differences in dispersion. The SDD for a school is equivalent to the radius of a circle in which two-thirds of the school's students would live. The larger the circle, the more challenging it becomes to provide transportation.

Individual SDD's were calculated for each school in the province based on the data provided by school boards in support of their calculation of home-to-school distance. An SDD for each board site was calculated by averaging the SDD for each of the board's schools within the site.

For 2004-05, an adjustment factor of 110% has been applied to the weighted student kilometres for each board site with an SDD of more than 10; an index value of 100% (equivalent to no adjustment) was applied for board sites with an SDD of less than 2.5; and intermediate values were applied for board sites with and SDD of between 2.5 and 10. A summary of the SDDs and the related

adjustment factor for each of the 138 board sites in the province is provided in *Table C-1 of Appendix C*.

Concentration of Students

Everything else being equal, the challenges in providing transportation services will be reduced for boards whose students are concentrated in clusters. As concentration is higher, it permits common bus stops for several students and therefore, a greater probability that a bus may be used for multiple runs.

A measure of student concentration has been made for each board site. This factor represents the number of pupils of the board per kilometre of road attending schools within the board site.

For 2004-05, an adjustment factor of 110% has been applied to the weighted student kilometres for each board site with fewer than 2 students per kilometre of road; an index value of 100% (equivalent to no adjustment) was applied for board sites with a more than 40 students per kilometre of road; and intermediate values were applied for board sites with between 2 and 40 students per kilometre of road. A summary of the number of students per road kilometre and the related adjustment factor for each of the 138 board sites in the province is provided in *Table C-2 of Appendix C*.

Proximity of Other Schools

The possibility of multiple bus runs (and hence reduced transportation costs per student kilometre) is likely greater for boards whose schools are closer together. A measure of the proximity of other schools for a board site was calculated by averaging the distance to the closest school for each of the board's schools within the site.

For 2004-05, an adjustment factor of 110% has been applied to the weighted student kilometres for each board site where the average distance to the nearest school was more than 10 kilometres; an index value of 100% (equivalent to no adjustment) was applied for board sites where the average distance to the nearest school was less than 0.73 km; and intermediate values were applied for board sites with where the average distance to the nearest school was between 0.73 and 10 kilometres. A summary of the average distance to the nearest school and the related adjustment factor for each of the 138 board sites in the province is provided in *Table C-3 of Appendix C*.

Traffic Conditions

The possibility of multiple bus runs (and hence reduced transportation costs per student kilometre) is reduced in areas with significant traffic congestion. Significant traffic on roads can also result in long ride times. The number of

vehicle registrations per kilometre of road within a board site is a reasonable proxy measurement for traffic conditions.

For 2004-05, an adjustment factor of 110% has been applied to the weighted student kilometres for each board site with more than 200 vehicle registrations per kilometre of road; an index value of 100% (equivalent to no adjustment) was applied for board sites with a fewer than 35 vehicle registrations per kilometre of road; and intermediate values were applied for board sites with between 35 and 200 vehicle registrations per kilometre of road. A summary of the number of vehicle registrations per kilometre of road and the related adjustment factor for each of the 138 board sites in the province is provided in Table C-4. As indicated in that table the same parameters apply to all boards operating schools in the same site. *[See Table C-4 of Appendix C.]*

Terrain

The possibility of multiple bus runs (and hence reduced transportation costs per student kilometre) is reduced in hilly areas of the province. For safety reasons, average bus speeds will be slower in hilly areas of the province. GIS technology makes it possible to calculate the average slope for roads within each board site.

For 2004-05, an adjustment factor of 110% has been applied to the weighted student kilometres for each board site where the average slope is more than 4 degrees; an index value of 100% (equivalent to no adjustment) was applied for board sites where the average slope is less than 1 degree; and intermediate values were applied for board sites with between 1 and 4 degrees. A summary of the average slope and the related adjustment factor for each of the 138 board sites in the province is provided in Table C-5. As indicated in that table the same parameters apply to all boards operating schools in the same site. *[See Table C-5 of Appendix C.]*

Dead-End Road Distance

The possibility of multiple bus runs (and hence reduced transportation costs per student kilometre) is reduced in areas of the province with a large number of long, dead-end roads. This issue is typically prevalent in lake districts. Buses have to travel considerable distances re-tracing their routes when picking up or dropping off students living on these roads.

GIS technology makes it possible to identify and measure dead-end roads across the province. This information has been used to compute the total length of dead-end roads which are at least one kilometre long for each board site.

For 2004-05, an adjustment factor of 105%² has been applied to the weighted student kilometres for each board site with more than 500 kilometres of such roads; an index value of 100% (equivalent to no adjustment) was applied for board sites with a fewer than 100 kilometres of such roads; and intermediate values were applied for board sites with between 100 and 500 kilometres of such roads. A summary of the number of length of dead end roads which are at least one kilometre long and the related adjustment factor for each of the 138 board sites in the province is provided in Table C-6. As indicated in that table the same parameters apply to all boards operating schools in the same site. [See Table C-6 of Appendix C.]

Snowfall

The possibility of multiple bus runs (and hence reduced transportation costs per student kilometre) is reduced in areas of the province which receive considerable amounts of snow. For safety reasons, average bus speeds will be reduced in snowy conditions.

“Climate Normal” data (i.e. 30-year averages) is compiled by Environment Canada for 256 weather stations across Ontario. Average annual snowfall is one of the many variables for which data is available.

Weather stations were located within board sites. A measure of average annual snowfall for each board site was obtained by taking a simple average of the measures for each of the weather stations within the board site. If no station existed in a board site then the nearest station reading was used.

For 2004-05, an adjustment factor of 105%³ has been applied to the weighted student kilometres for each board site where average annual snowfall exceeded 250 centimetres; an index value of 100% (equivalent to no adjustment) was applied for board sites where average annual snowfall was less than 125 centimetres; and intermediate values were applied for board sites where average annual snowfall was between 125 and 250 centimetres. A summary of the average annual snowfall and the related adjustment factor for each of the 138 board sites in the province is provided in Table C-7. As indicated in that table the same parameters apply to all boards operating schools in the same site. [See Table C-7 of Appendix C.]

² A maximum adjustment of 5 percent (rather than the 10 percent used for factors discussed previously) has been applied to this factor because a significant number of dead-end roads provide access only to industrial sites (e.g. logging camps and mines) or to cottages used only in summer months. There is no need for school buses to use these roads as no permanent residents would be using student transportation.

³ A maximum adjustment of 5 percent (rather than the 10 percent used for factors discussed previously) has been applied to this factor because snowfall impacts transportation for only half of the academic year.

Temperature

Boards serving colder parts of the province may require more buses in winter months, as walk distances and waiting times are reduced to minimize student exposure to cold temperatures.

The average annual degree-days with temperatures below 0° C⁴ is another of the “Climate Normal” variables that Environment Canada compiles for the 256 weather stations in Ontario. A measure of average annual degree days with temperatures below 0° C for each board site was obtained by taking a simple average of the measures for each of the weather stations within the board site. If no station existed in a board site then the nearest station reading was used.

For 2004-05, an adjustment factor of 105%⁵ has been applied to the weighted student kilometres for each board site where the average number of degree days with temperatures below 0° C exceeded 1,800⁶; an index value of 100% (equivalent to no adjustment) was applied for board sites where the average number of degree days with temperatures below 0° C was less than 600; and intermediate values were applied for board sites where the average number of degree days with temperatures below 0° C was between 600 and 1,800. A summary of the average number of degree days with temperatures below 0° C and the related adjustment factor for each of the 138 board sites in the province is provided in Table C-8. As indicated in that table the same parameters apply to all boards operating schools in the same site. [See Table C-8 of Appendix C.]

Composite Adjustment Index

A summary of the eight adjustment factors outlined above for each of the 138 board sites is provided in *Table C-9 of Appendix C*. These factors were multiplied together to obtain a board site-specific composite adjustment index for each board.

The composite adjustment index was then applied to the total number of weighted student kilometres for the board site to calculate what is referred to as the number of “adjusted weighted student kilometres”.

A Composite Adjustment Index for each board taken as a whole was derived by summing both the “weighted student kilometres” and the “adjusted weighted student kilometres” for all of the board’s sites and dividing one by the other as illustrated below.

⁴ If the mean temperature on a given day was -5° C, the number of degree-days below 0° C would be five.

⁵ A maximum adjustment of 5 percent (rather than the 10 percent used for factors discussed previously) has been applied to this factor because colder temperatures impact transportation for only half of the academic year.

⁶ For the period between November 1 and March 31, 1,800 degree days below 0° C represents an average daily temperature of about -12° C; 600 degree days below 0° C represents an average daily temperature of about -4° C.

Board Site	Site-Specific Composite Adjustment Index	Weighted Student Kilometres	Adjusted Weighted Student Kilometres
A	123.4%	162,020	199,933
B	118.6%	113,732	134,886
TOTAL	121.4%	← 275,752	334,819

Documentation of the calculation of the Composite Adjustment Index for each board is provided in *Tables C-10 and C-11 of Appendix C*.

Allocations for General Transportation, 2004-05

Before allocations for General Transportation may be calculated for 2004-05 one additional modification to the calculations is required to take into account changes in enrolment that have occurred since 2002-03, the year for which home-to-school distances were measured. For 2004-05, proportional increases to the number of “adjusted weighted student kilometres” will be made for boards whose enrolment in 2004-05 is greater than it was in 2002-03. No negative adjustments, however, will be made for boards whose enrolment has declined.⁷

Allocations for General Transportation are determined by applying a standard cost factor to the adjusted weighted student kilometres of each board. For 2004-05, a cost factor of \$34 is used. *The appropriateness of this cost factor and its relationship to other parameters used in the funding model will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes to this cost factor may be made for purposes of calculating transportation grants in 2005-06.*

Boards serving Northern Ontario are also eligible to receive a premium in recognition of higher costs for such items as fuel, for example. For 2004-05, this premium is 2.5 percent.⁸ *The appropriateness of this adjustment factor will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes to this factor may be made for purposes of calculating transportation grants in 2005-06.*

⁷ Measuring home-to-school distance, while fairly straightforward for many boards, presented considerable challenges for boards in Northern Ontario where digital maps of the entire road network in their jurisdictions are not available. This problem is expected to be eliminated in the next few years as the Ministry of Natural Resources improves its information systems and makes fully geo-coded maps available to school boards through the Ontario Geospatial Data Exchange (OGDE). Until that time, the Ministry does not intend to ask school boards to update the calculations of home-to-school distance for their students. Similar processes as those for 2004-05 will be used to reflect the impact of enrolment changes in subsequent years.

⁸ Per Ontario Government policy adjustments to reflect higher costs in Northern Ontario also apply to the Muskoka region. Two school boards whose jurisdictions are primarily in Southern Ontario (Simcoe Muskoka Catholic DSB, Trillium Lakelands DSB) have schools in Muskoka. They are therefore eligible for the 2.5 percent adjustment for Northern boards for that part of their jurisdiction.

French language boards are also eligible to receive a premium in recognition of the unique circumstances that they face, including difficulties in hiring drivers who can speak French and coordinating transportation services with a variety of partner boards. For 2004-05, this premium is 20%. *The appropriateness of this adjustment factor will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes to this factor may be made for purposes of calculating transportation grants in 2005-06.*

Documentation of the calculation of each board's simulated allocation under the General Transportation component of the model, reflecting current projections of enrolment for 2004-05 are provided in *Table D-1 of Appendix D*.

2. MOBILITY ACCESSIBLE TRANSPORTATION NEEDS

Many students require transportation in specialized vehicles, which can accommodate wheelchairs and provide access for students with mobility problems.

For 2004-05, allocations for this component of the transportation funding model will be determined as follows:

- boards will record the number of pupils of the board requiring transportation in such specialized vehicles in their audited financial statements as of October 31, 2004;
- each board will be entitled to an base allocation of \$10,000 per student;
- the base allocations for each board will be multiplied by the Composite Adjustment Index for the board in recognition that the factors affecting routing and efficiency also apply;
- boards serving Northern Ontario are also eligible to receive a premium in recognition of higher costs. The Adjustment for Northern Boards factor applied under the General Transportation component of the model will also be applied in the calculation of the allocation under the Mobility Accessible Transportation Needs component of the funding model.

The appropriateness of this approach and the magnitude of the base allocation per student will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

Documentation of the calculation of projections of each board's allocation under the Mobility Accessible Transportation component of the model for 2004-05, based upon information provided by boards in the annual Student Transportation Survey, are provided in *Table D-2 of Appendix D*.

3. SPECIAL EDUCATION TRANSPORTATION NEEDS

Specialized transportation services are required for students in self-contained and partially integrated special education classes and students enrolled in Care and Treatment programs (Section 20) which are delivered at a school of the board. These classes are often not located in schools closest to where the students live. Generally, these students must be picked up and dropped off at home and may require additional supervision.

For 2004-05, allocations for this component of the transportation funding model will be determined as follows:

- boards will record the number of pupils of the board for whom an Individual Education Plan (IEP) has been developed and who receive more than 50 percent of their instructional time in self-contained special education classrooms in their audited financial statements as of October 31, 2004;
- boards will also record the number of approved places reserved for Section 20 students in programs which are delivered in a school of the board;
- each board will be entitled to an base allocation of \$1,000 per student;
- the base allocations for each board will be multiplied by the Composite Adjustment Index for the board in recognition that the factors affecting routing and efficiency also apply;
- boards serving Northern Ontario are also eligible to receive a premium in recognition of higher costs. The Adjustment for Northern Boards factor applied under the General Transportation component of the model will also be applied in the calculation of the allocation under the Special Education Transportation component of the funding model.

The appropriateness of this approach and the magnitude of the base allocation per student will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

Documentation of the calculation of projections of each board's allocation under the Special Education Transportation component of the model for 2004-05 are provided in *Table D-3 of Appendix D*. The information in this table is based upon

data from either the September reports or board audited financial statements, and Section 20 approvals for 2003-04.

4. OTHER SPECIAL TRANSPORTATION NEEDS

There is a very small number of students in Ontario schools who are not enrolled in special education programs, but who require special transportation services for a variety of reasons. For example, the student may not be able to safely walk to a bus stop on his or her own; the student may be disruptive on regular buses; the student's whereabouts are being kept confidential.

The administrative burden associated with reporting and approving special allocations to cover the additional costs of providing transportation services to these students is prohibitive. Therefore, for 2004-05, allocations for this component of the transportation funding model will be determined as follows:

- boards will apply a constant percentage factor of 0.5 percent to their total enrolment in their audited financial statements to obtain a proxy representing the number of students with special transportation needs;
- each board will be entitled to an base allocation of \$1,000 for each of these "proxy students";
- the base allocations for each board will be multiplied by the Composite Adjustment Index for the board in recognition that the factors affecting routing and efficiency also apply;
- boards serving Northern Ontario are also eligible to receive a premium in recognition of higher costs. The Adjustment for Northern Boards factor applied under the General Transportation component of the model will also be applied in the calculation of the allocation under the Other Special Transportation Needs component of the funding model.

The appropriateness of this approach and the magnitude of the base allocation per student will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

Documentation of the calculation of projections of each board's allocation under the Other Special Transportation Needs component of the model for 2004-05, based upon current projections of 2004-05 enrolment levels, are provided in *Table D-4 of Appendix D*.

5. TRANSPORTATION TO PROVINCIAL SCHOOLS

District school boards provide transportation for exceptional pupils attending one of the eight provincial demonstration schools for the blind, deaf and deaf/blind and for severely learning disabled students. The board responsible for transporting the student is the board that the child has the right to attend. Funding to offset the costs of providing this transportation has historically been included in the calculation of funding allocations for student transportation. This practice will continue under the new funding model. Boards will continue to report expenditures, as approved by the Ministry, that they have made to provide transportation to and from Provincial Schools in their audited financial statements.

In the coming months, the ministry will consult with school boards to explore the potential to achieve savings and efficiencies through greater collaboration.

In 2003-04, approximately \$7.83 million was provided in support of transportation to provincial schools. Projections of board allocations for this component of the transportation funding model for 2004-05 summarized in *Table D-5 of Appendix D* reflect the board's 2003-04 expenditures increased by 2 percent.

6. UNIQUE TRANSPORTATION SERVICES NEEDS

Some boards face unique situations in providing transportation services for their students in that transportation is provided in vehicles which do not travel on roads. For example, the Greater Essex DSB ferries students from Pelee Island to secondary schools in Kingsville (in winter months when the ferry is not running these student are flown to and from the island). Under the current funding model there is no explicit allocation to cover these costs.

For 2004-05, boards will report expenditures, as approved by the Ministry, that they have made to provide transportation services to students living on islands in vehicles that are not able to travel on roads and receive grants to cover these costs.

The appropriateness of this approach will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

In 2003-04, boards spent approximately \$162,000 in the provision of unique (non-road) transportation services. Projections of board allocations for this

component of the transportation funding model for 2004-05 summarized in *Table D-6 of Appendix D* reflect the board's 2003-04 expenditures increased by 2 percent.

7. BOARD AND LODGING

In a number of cases, particularly in remote communities in Northern Ontario, secondary students and their parents agree that arranging for board and lodging to attend a school in a distant community because there is no closer secondary school to the student's home, is more desirable and cost effective than having transportation from their own home to and from the school on a daily basis. Currently, board and lodging is based on the 1997 expenditure level adjusted by enrolment changes. Consequently, if a district school board was provided funding at that time it continues to receive funding, adjusted for enrolment changes.

For 2004-05, boards will report the number of pupils of the board as of October 31, 2004, for which board and lodging arrangements have been made, and will receive, as approved by the Ministry, an allocation of \$5,000 for each in respect of the associated costs.

The appropriateness of this approach will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

In 2003-04 boards reported expenditures of \$125,000 for Board and Lodging in the annual Student Transportation Survey. Projections of board allocations for this component of the transportation funding model for 2004-05 summarized in *Table D-7 of Appendix D* reflect the board's 2003-04 expenditures increased by 2 percent.

8. SAFETY PROGRAMS

In December 2002, each board received an allocation of \$2.00 per pupil to assist them to provide safety programs for their students and to assist school bus drivers to keep students safe (e.g. maintaining general discipline on buses and appropriate student behaviour at bus stops; dealing with allergic reactions and other medical emergencies). The explicit designation of an allocation for safety programs was lost in 2003-04 when this allocation was included in the overall funding base.

For 2004-05, the explicit allocation for safety programs will be reinstated. Boards will receive an amount equal to \$2.00 per pupil for this purpose.

The appropriateness of this approach will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

Documentation of the calculation of projections of each board's allocation under the Safety Programs component of the model for 2004-05, based upon current projections of 2004-05 enrolment levels, are provided in *Table D-8 of Appendix D*.

9. LOCAL HAZARDS

The measurement of home-to-school distances used in calculating the General Transportation Needs component was based on the shortest road distance.

These measurements were made using specialized software and digital maps. In reality, students may take different routes to avoid local hazards such as busy streets; highway / railway crossings; bridges over open water; and bears and other dangerous wildlife in proximity to bus stops in forested areas.

The administrative burden associated with modifying the home-to-school measurements to take into account such hazardous conditions is prohibitive. Accordingly, under the new approach, each board will be provided with an allocation to enable them to modify the transportation services that they provide to take into account local hazards.

For 2004-05, allocations for this component of the transportation funding model will be equal to 5 percent of the General Transportation allocation. *The appropriateness of this approach will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.*

Projections of board allocations for this component of the transportation funding model for 2004-05 are summarized in *Table D-9 of Appendix D*.

10. LOCAL PRIORITIES

The new model includes an explicit allocation which is intended to provide additional flexibility to enable school boards to respond to local needs by providing such services as:

- noon-hour transportation for Junior and Senior Kindergarten programs;

- late busing to facilitate extra-curricular activities or for students who require extra help after school.
- transportation to enable students to have a wider choice of curricula than might be available at their “home school”
- subsidies to cover the extraordinary costs of specialized wheelchair accessible vehicles for field trips; or
- enhanced service standards.

For 2004-05, allocations for this component of the transportation funding model will be equal to 5 percent of the General Transportation allocation. *The appropriateness of this approach will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.*

Projections of board allocations for this component of the transportation funding model for 2004-05 summarized in *Table D-10 of Appendix D.*

11. ADMINISTRATION

The new transportation funding model incorporates a component to recognize the cost of administering a safe and efficient student transportation system, including:

- Planning and optimizing routes for general transportation to ensure efficiencies;
- Negotiating contracts with school bus operators;
- Communicating with parents regarding bus schedules, etc.;
- Making specialized arrangements for students requiring home pick up and drop off, e.g.:
 - Mobility accessible transportation;
 - Special program and other special needs students;
- Coordinating transportation services with other boards;
- Coordinating the delivery of safety programs; and
- Making arrangements for transportation of students to Provincial Schools

For 2004-05, the allocation for the Administration component of the transportation funding model to which each board will be entitled will be made up of two distinct parts:

- An allocation equal to 3% of the total allocation for direct and indirect transportation services (all of the components discussed above); and
- An allocation equal to \$5,000 per board site in which it operates schools in recognition of the additional workload associated with coordinating transportation services in different board sites within its jurisdiction.

The appropriateness of this approach will be examined in the consultation process to be conducted over the next several months. Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

Projections of board allocations for this component of the transportation funding model for 2004-05 summarized in *Table D-11 of Appendix D*.

SIMULATIONS OF BOARD ALLOCATIONS⁹

Table D-12 of Appendix D provides a summary of projections of individual board allocations for each component of the new transportation funding model. If the consultation process to be carried out over the next several months recommends no changes to any of the funding parameters discussed above, this summary provides a good indication of the funding levels that boards might expect to receive (in 2004-05 dollars) for student transportation over the long term.

If the consultation process does result in changes to any of the funding parameters being implemented effective 2005-06 (or subsequent years), projections outlined in this paper will be misleading. Boards may wish to defer making any major decisions which may significantly impact their expenditures on student transportation until the results of that consultation are made available.

PHASING IN THE NEW FUNDING MODEL IN 2004-05

To provide for a responsible introduction of this new funding approach, and to ensure stability in the system, board allocations under the new funding model will be phased-in. Funding for student transportation will not be reduced for boards if the application of the new formula results in an allocation which was less than the amount received in 2003-04. Similarly, in recognition that additional consultation is required before funding parameters are finalized, percentage increases will be capped for boards projected to receive increases in funding under the new model, as illustrated in the table below.

As announced by the Minister, benchmarks used to calculate various components in the Education Funding Model have been increased to keep up with recent cost increases. As a result, all boards will receive a 2% increase in funding for student transportation in 2004-05 in addition to the amounts they are entitled to receive as a result of phasing in the new model. It is estimated that

⁹ Under the new approach, boards will continue to receive an additional allowance for transportation included under the Learning Opportunities Grant for literacy and math remediation programs. These allowances are over and above the projections of board allocations discussed in this section.

the Student Transportation Grant will total \$684.7 M in 2004-05, which represents an increase of \$33.5 M or 5.1% over 2003-04 funding levels.

Comparison of Application of New Model with 2003-04 Allocation	Phase In Allocation	Benchmark Adjustment	Total Change in Funding for Student Transportation
Increase of greater than 30%	10.0 %	2.0%	12.0%
Increase of greater than 15% and less than or equal to 30%	5.0%	2.0%	7.0%
Increase of greater than 2.5% and less than or equal to 15%	2.5%	2.0%	4.5%
Increase of less than or equal to 2.5% (i.e. x%)	x%	2.0%	x+2%
Decrease	0.0%	2.0%	2.0%

Projected allocations for each board reflecting these phase-in provisions are summarized in Table 1.

Table 1 – Projected Transportation Allocations, 2004-05

DSB #	BOARD	Simulated Allocation	2003-04 Allocation for Student Transportation	Percentage Change	Percentage Increase Per Phase-in	Amount of Phase-in Increase	2% Benchmark Increase	Total Increase for 2004-05	Projected 2004-05 Allocation

CONSORTIA

The government recognizes that much work has been done in the sector to deliver student transportation efficiently through consortia, but there is still more to do. School boards are strongly encouraged to continue to build partnerships and to look for ways of delivering student transportation in order to ensure that duplication of effort is eliminated.

Numbered Memorandum 2003:B15 indicated that school board allocations for student transportation would be contingent on a board's participation in a consortium. That requirement has been deferred for 2004-05. During the consultation period over the coming year on the new funding model, boards will also have an opportunity to provide advice around the issue of consortia.

CONSULTATION PROCESS

Through this initial stage of implementation, the ministry will continue consulting the Transportation Review Committee and other education partners throughout 2004-05 on any and all components of the new funding model.

Depending upon the advice received through that process, changes may be made for purposes of calculating transportation grants in 2005-06.

Additional written comments and suggestions may be forwarded to:

Appendix A

HOME-TO-SCHOOL DISTANCES FOR BOARDS IN THE NEW FUNDING MODEL

Introduction

General transportation is the most significant of the four needs identified in the new student transportation funding model. It addresses a school board's need to provide transportation to students because the school board deems their home-to-school distance as greater than that established in its policy. For the purpose of the new funding approach, the ministry takes the shortest home-to-school distance by road for all students in a board as a key variable in determining its general transportation need. Announcement of the new transportation funding model's structure was made in Numbered Memorandum 2003:B15. (A copy is attached in Appendix A-1.)

Data Source

In memorandum 2003: SB14, sent on June 26, 2003, school boards were requested to provide measurements of the shortest home-to-school distance for each of their students classified as a "pupil of the board" during the 2002-03 school year. (A copy is provided in Appendix A-2.) To be consistent with other grants, the ministry requested that a board's data should exclude:

- Native students living on a reserve for whom a fee may be charged;
- section 20 students;
- adult students over 21 years of age; and
- visa students.

Guidelines were issued with the above memorandum providing details of this data collection exercise, as well as directions for boards to follow for completing the process. (See Appendix A-2)

Data Quality Assurance

A vigorous process was implemented to ensure that data collection was conducted consistently and that distance information received was as accurate as possible.

Upon receipt of board data, ministry staff:

- reviewed the completeness of all data fields;
- compared student numbers with ministry records from financial reports; and
- identified any anomalies.

The ministry followed up with school boards to ensure that all anomalies identified could be explained and resolved. Typical examples of common anomalies included:

- the entry of a default distance value of 999.99 or 0 when the distance of a student could not be generated;
- the presence of a large number of records showing extraordinarily long distances; and
- the absence of distance values for a significant portion of students (within boundary), in most cases due to mapping and addressing issues.

Board staff were also requested to provide supplementary information when unmatched school codes, missing grades and French immersion program information, etc. were identified.

Problems specific to individual boards were followed up and tracked. Any solution was discussed with the board.

Faced with several scenarios involving missing student data, the ministry adopted the following solutions to capture student distances:

Circumstances	Solution	Remarks
<p>Boards were missing distances for some students (boards could not match those students on their map).</p> <p>The missing distances were all related to specific schools and locations.</p> <p>Boards could provide student addresses information to the ministry.</p>	<p>The ministry assisted with measuring distances.</p>	<p>Four boards had some of their student home-to-school distances measured by the ministry in this way.</p>
<p>Boards provided distances for most of their students but were missing information for some.</p> <p>Board did not provide address information of their missing distances.</p> <p>The missing distance data was distributed throughout the</p>	<p>The ministry normalized the distances for these students by applying the board's average distance, by panel, to the missing distances.</p>	<p>This method also applied to boards that had provided address information for which the ministry could not generate distances with the addresses provided; board averages for each panel were applied to those students as well.</p>

Circumstances	Solution	Remarks
board jurisdiction.		
Boards could not provide home-to-school distances or accurate address information for their non-transported students due to student data issues.	A comparison was made with boards in the same jurisdiction and with boards in the same system in the region. Comparable averages were assigned to the missing elementary and secondary students living below a certain distance for that board.	As these students were all walkers and lived within the distance prescribed by the board's policies, the ministry could not adopt the board average as it would not have accurately estimated the distances for these students.
Boards could not provide any distance data or accurate student address data for mapping.	The ministry developed an alternate process, whereby it used the student postal code information provided by individual schools boards to measure home-to-school distances. In order to measure home-to-school distance, ministry GIS staff distributed students of the same postal code to multiple centre points based on Statistics Canada demographic data. This eliminated the effect of a rural postal code covering a large geographic area.	Two northern Ontario boards had their distances measured using this method. Board representatives were invited to review the results of the measurements and adjustments were made based on their local knowledge.
Out of boundary students.	Since most boards could not map students living outside their jurisdiction ¹ , ministry staff measured the distances for these out of boundary students using postal code data provided by the boards.	

In reviewing board data on student home-to-school distance, ministry staff generated aggregate and average board distances using the “centre points” of each student’s postal code as provided by boards and compared results of the two distance measurements. Based on a sample of over 20 boards, it was determined that all boards had provided lower average distances than those measured by the ministry using postal codes, with a smaller gap for more urban boards. This comparison gave the ministry confidence that boards’ measurements were not overstated in their reported distances.

¹ School boards were instructed not to provide distance for their out of boundary students, even though these students were to be included in the data file. Ministry staff measured the distance based on the postal code information given for these out of boundary students. If boards included distance measured for their out of boundary students, they were substituted with the ministry’s measurements.

Ministry staff also examined board reports that indicated a significantly lower aggregate average distance than that obtained by the ministry using postal code data. As a result, the ministry identified two boards that showed a significant number of students with a reported distance of “0”. After establishing the reasons for the anomalous distances, boards were notified and distances were adjusted accordingly.

Ministry staff also created reports showing various distance ranges. Samples of student data that were reported to have a home-to-school distance of over 100 km were reviewed. Such records were compared with distances generated by the ministry using postal code information. Various reasons for these variances were identified, including the measuring of distances from the centre point of a postal code area to a school. Inaccurate and doubtful records were either corrected or removed.

It was assumed that students do not travel daily one-way distances greater than 100 km. The new funding approach provides students travelling a longer distance with the possibility for board and lodging, and in some cases assists them with unique transportation needs funding. In addition, out of boundary students are unlikely to commute on a daily basis to their school of attendance from a distant location. A total of 274 students, including 163 out of boundary students, were shown to have home-to-school distances exceeding 100 km. Instead, their distances were replaced with the board’s average distance for each panel.

Details of actions taken to deal with unique challenges due to data limitations are provided in Appendix A-3.

Normalization of Aggregate Distance on Transportation Sites

School boundaries do not overlap perfectly. For example, the jurisdiction of Dufferin-Peel Catholic District School Board covers two English public boards, the Peel District School Board (in Peel Region) and Upper Grand District School Board (in Dufferin County). Therefore, it has the potential to be involved in two transportation partnerships. The jurisdiction served by many French language boards covers territory served by a number of English boards. CSD Centre Sud-Ouest, for example, provides transportation services in 13 different sites.

The Ministry subdivided the province into 35 “sites.” Each site has a unique combination of the four school board types: English public; English Catholic; French public; French Catholic. A listing of each of these sites and their component boards is provided in Appendix A-4.

The 35 sites were further divided into sub-sites. Each sub-site has a different and unique combination of boards covering the area. The subsite concept is developed so that adjustments can be applied consistently to the distance figure

of each board in each subsite, as they share the same physical and other geographic conditions. Each subsite consists of at least one board site. Board site refers to a board's area covering that subsite. School boards that cover a large geographic area e.g. large French boards, will have their aggregate distance in each board site adjusted through various geographic factors. The aggregate and average distance for each panel of all boards were distributed to each board site according to the ratio of students reported attending their schools in each of the 138 board sites.

The distance in each of the board site was then multiplied by an enrolment normalization factor, which is the ministry enrolment headcount of a board² over the board's student records³ submitted in this exercise. This distance result should eliminate issues of inconsistent student head counts as they might have reflected data taken on different dates. A total board distance is summed from all the board sites and a board average is generated.

The total distance is applied to the per kilometre allowance to calculate a board's general need transportation allocation. The calculated board average reflecting the 2002-03 data is used as the baseline and can be applied to new enrolment numbers in subsequent years until a new baseline is re-established.

² Enrolment headcounts are averages of full- and half-time students reported by boards on Oct 31, 2002 and March 31, 2003.

³ This refers to the number of students for whom a distance measurement was provided by the board. It does not include students that a board included without a distance measurement (except out of boundary students).

2003: B15

MEMORANDUM TO: Directors of Education

FROM: Norbert J. Hartmann
Assistant Deputy Minister
Elementary Secondary Business and Finance Division

DATE: June 26, 2003

SUBJECT: New Transportation Funding Model

Since the introduction of student-focused funding, the ministry has been working with the Transportation Review Committee to develop a new transportation funding model that responds to need. For its part, the government has increased transportation funding by 15 percent since 1998 to recognize rising costs.

In December, 2002, the Education Equality Task Force (EETF) chaired by Dr. Rozanski, made several recommendations related to transportation. The government has moved quickly to implement two of these recommendations. First, for 2002-03, steps were taken to fully allocate the \$20 million announced in the June budget. Second, for 2003-04, the funding benchmark for transportation was increased by a further \$22.4 million, thereby achieving more than one-half of the benchmark increase that Dr. Rozanski recommended be implemented over three years. In addition, for 2003-04, the student-focused funding grant regulation provides that transportation funding will not be reduced to reflect declines in enrolment. As a result of these measures, funding for transportation is projected to rise to \$651.8 million, which is an increase of about 7 percent over the 2002-03 funding announcement of last May.

The EETF also recommended that the Ministry of Education complete the development of a Transportation Grant that was based on need, and that the ministry develop a funding policy for the transportation of students with special needs. I am pleased today to advise you that we are moving forward to implement these recommendations, and that if the appropriate regulations are approved, a new funding model for student transportation will be put in place for the 2004-05 school year.

The proposed new model will respond to differences in transportation need across the province, including:

- differences in the need for general transportation services because of geography and the distance between students' homes and their schools;
 - differences in the need for specialized vehicles to provide transportation services to students in wheelchairs or with other mobility challenges;
 - differences in the need for transportation services for special education programming;
- and

- differences in the need for unique transportation services (air, water), board and lodging, and transportation to Provincial Schools.

As illustrated in Table 1, the structure of the proposed new model includes specific allocations for the following components: general transportation; mobility accessible transportation; transportation for special education programs; other special transportation needs; and allowances for safety programs, administration, local priorities and local hazards. Table 1 also outlines the processes which will be used over the next several months to determine specific funding parameters. That work, which will be overseen by the Transportation Review Committee, is expected to be completed this fall.

As indicated in Table 1, information on the home-to-school distance for all students in the board will be necessary to implement the new model. Processes to compile this information have been developed over the past few months and tested by board representatives on the Transportation Review Committee. Details will be shared with you under separate cover. I would ask that you and your staff respond quickly to the data request so that we can meet the project completion date noted above.

The proposed new model is based on the assumption that transportation services are being delivered as effectively as possible. In keeping with the advice of Dr. Rozanski, the government sees the consortium approach as the most effective method of delivering safe and accessible transportation services for Ontario students. The government has therefore decided that boards would have to be part of a transportation consortium to be eligible for funding under the new model.

Last December, the Minister announced funding allocations for all boards to assist them in establishing consortia. Over the coming months, ministry staff will be following up to assess the collaborative arrangements that are in place, and what further steps can be taken by boards to move to consortia while respecting denominational and charter considerations. Boards that are currently not in a consortium are strongly encouraged to begin consortia planning now. Further details on the proposed consortia requirement will be provided in the fall.

In closing let me take this opportunity to thank the members of the Transportation Review Committee for their hard work and commitment in bringing this important work to a satisfactory conclusion.

If you require further information regarding the new funding approach, please contact Drew Nameth at (416) 325-4030 or via e-mail at: drew.nameth@edu.gov.on.ca.

Table 1
Structure of Proposed Approach for Student Transportation Funding

$$\text{Funding} = \text{Need} \times \text{Cost} + \text{Adjustments}$$

NEED			COST	
Type	Description	How to be Determined	Description	How to be Measured
1. General Need	The total distance from home to school aggregated over all students in a board.	Measure the distance from home to school, via road network, for each student at a board using either the board's student transportation management system or a standard Geographic Information System. Aggregate these distances for all students at the board. Assess reasonableness of adjusting the total distance to reflect such factors as dispersion, density, traffic, etc.	Annual allowance per kilometre. The allowance in the North may differ from the allowance used in the South to reflect difference in the cost of operating a school bus.	Based on data reported in the annual Transportation survey.
2. Mobility Accessible Need	The students at a school board that require wheelchair accessible transportation.	Based on the actual count of students requiring wheelchair accessible transportation because of the student's long-term mobility disabilities.	Annual per pupil allowance.	Based on data reported in the annual Transportation survey.
3. Special Education Programs Need	The students at a school board that require transportation to self-contained or partially integrated special education classes.	Based on the actual count of students: on: <ul style="list-style-type: none"> • enrolled in a self-contained or partially integrated special education class; or • the number of ISA2 and ISA3 students in the board 	Annual per pupil allowance.	Based on data reported in the annual Transportation survey.
4. Other Special Transportation Needs	The students at a school board that require transportation from their home address for behavioural or safety reasons and are not in a congregated special education class.	Proxy based on: <ul style="list-style-type: none"> • a percentage of the number of ISA 2 and ISA 3 students; and/or • a percentage of a board's total enrolment 	Annual per pupil allowance.	Based on data reported in the annual Transportation survey.

Adjustment	Description	How to be Determined
1. Safety Programs	Allocation to provide school boards with the resources to implement school bus safety programs for all students	Per pupil allocation based on a board's total enrolment.
2. Administration	Allocation to address the administration costs of managing a transportation system.	Percentage of a board's expenditure for transportation or funding allocation.
3. Local Priorities	Allowance to enable boards to provide non-standard transportation in accordance with a board's priorities (e.g. double runs for after school transportation, noon hour transportation)	Percentage of a board's expenditure for transportation or funding allocation.
4. Local Hazards	Allowance to recognize the fact that additional transportation services may be required to ensure that are not required to walk in hazardous areas on their way to school.	Percentage of transportation expenditure, possibly varying by board. (e.g. increasing based on the degree of "urban-ness" of a board.)
5. Unique Transportation Needs	Allocation to cover the costs incurred by boards that are required to transport students by boat or air.	Budget approval process administered by Ministry staff.
6. Board and Lodging	Allocation to cover the costs of boards and lodging costs of certain eligible students.	Budget approval process administered by Ministry staff.
7. Transportation to Provincial Schools	Allocation to cover the expenditures to transport students of a board who attend a provincial demonstration school.	Budget approval process administered by Ministry staff.

MEMORANDUM TO: Senior Business Officials
Transportation Managers

FROM: Drew Nameth

DATE: June 26, 2003

SUBJECT: New Transportation Funding Model: Data Requirements

As a follow-up to Norbert Hartmann's memorandum (B15, dated June 26, 2003), I am writing to provide you with more information regarding the data requirements for the new transportation funding model. Attached are instructions on completing the Student Transportation Data Requirements Form. The information to be compiled through this process is critical for the implementation of the new approach.

As indicated in Mr. Hartmann's memorandum, processes to compile this information have been developed tested by board representatives on the Transportation Review Committee. We therefore expect most boards to be able to provide the necessary material without significant problems. Boards are requested to courier a CD copy of the completed file to my office by August 20, 2003.

We do recognize that some boards do not have access to high quality digital maps for their jurisdictions, and may have difficulty providing the required data. These boards are asked to contact Grant Osborn at (416) 325-6268 (e-mail: grant.osborn@edu.gov.on.ca) or Jarrett Laughlin at (416) 325-2027 (e-mail: jarrett.laughlin@edu.gov.on.ca) to discuss your issues.

I thank you for your continued commitment to the development and implementation of the new funding approach for student transportation. If you have any questions regarding this request, please contact Sandy Chan at (416) 325-2464 (e-mail: sandy.chan@edu.gov.on.ca) or Sandra Diprospero at (416) 325-4906 (e-mail: sandra.diprospero@edu.gov.on.ca).

Instructions for Completing the Transportation Data Requirements Form

The Data Requirements Form has been created in order to obtain the necessary information on students' distance* to school to assist with the development of the proposed new transportation-funding model. For this reason the information requested must be must be obtained for all boards.

Please use the following link: <http://transport/datacollection.asp> to access the Data Requirement Form. The user ID is transportation and password is accountability. Please select the file with your board name and download the file from this link (either the (xls) or (zip) file – they are the same). Populate this form with the necessary data; save the file on a CD; and submit it by August 20, 2003 via courier to:

Drew Nameth
Director, Business Services Branch
Ministry of Education
21st Floor, Mowat Block
Queen's Park
900 Bay Street
Toronto, ON M7A 1L2

The form consists of three separate sheets that can be accessed through three tabs at the bottom of screen (student table, school table, and multiple school ID). Please follow the instructions below in completing the Data Requirements Form.

For this data collection exercise boards **must include all students for the 2002-03 school year** that attend your schools with the exception of Section 20 students (formally Section 19), adult students, VISA students or students who are attending a non-board facility.

* Distance to school will be based on the address that your student transportation software uses to calculate distance to school. Please use only one distance measurement per child.

STUDENT TABLE

STEP 1

Open your file and select the student table tab found at the bottom left hand corner of the screen. You will note that your five-digit board ID number and the name of your board should already be populated in the row below the ID number.

Board ID:

28002

Name of Board:

District School Board Ontario North East

STEP 2

Please copy/enter the following information for each student; address used to calculate distance, municipality, postal code, grade, indicate whether the student is French Immersion by entering Y/N, indicate if student lives within the board boundary by entering Y/N, distance **in kilometres to one decimal place** (e.g. 5.1, 0.2) .The distance the student is from school via the shortest roadway, and enter the school of attendance ID that your board uses in your transportation system.

Please note that school boards with more than approximately 65,000 students will be required to make copies of the student table sheet in order to accommodate all of their students. Excel worksheets are limited to 65,000 rows of data.

Please note that a record number for each student is required. The board must track this numbering system so that the students can be traced at a later date by the board.

School boards do not need to calculate a distance measurement for students living outside of the board’s boundary. The ministry will measure out of boundary students using the postal code of the student and measuring it to their school of attendance.

The ministry has provided explanations to the required data input. The explanations can be found by simply clicking on the header.

Record Number	Student home address	Municipality	Postal Code	Grade of student	Is this a French Immersion student (Y/N)	Does student live within Board boundary (Y/N)	Distance in kms from home to school	School ID
---------------	----------------------	--------------	-------------	------------------	--	---	-------------------------------------	-----------

SCHOOL TABLE

STEP 3

To access the school table, please click on the school tab at the bottom of the screen. This sheet should be populated with the following data:

- Board No
- Name of Board
- All facilities and the appropriate SFIS number
- Facility address
- Facility Municipality
- Facility postal code
- Lowest Grade School Offers
- Highest Grade School Offers

Again, explanations of the data required can be found by clicking on the header row.

Board ID: 28002

Name of Board: District School Board Ontario North East

DSB_Number	DSB_Name	School ID	SFIS #	Facility Name
------------	----------	-----------	--------	---------------

STEP 4

Match and enter each school ID that was used in the student table with its applicable SFIS number. In some cases boards have more than one ID for a school, please follow the instructions on dealing with the additional IDs below. Please note that any facility information that is not a school should be ignored. For schools in this table that are no longer active please provide a note when you submit your data to the ministry listing these schools.

School ID	SFIS #	Facility Name	School address
-----------	--------	---------------	----------------

*If a school has more than one school ID, please refer to Step 7 on how to proceed with multiple IDs.

STEP 5

Please note that the populated columns cannot be changed. If corrections are required to be made to the information found in the populated columns, please enter the changes in the appropriate blank columns provided in the table.

STEP 6

Please indicate with a Yes/No whether the school offers a French Immersion program. If the school offers both a French Immersion program and a regular program the board should answer "Both". For French Boards enter "No".

French Immersion facility (Yes/No/Both)?

*MULTIPLE ID TABLE

STEP 7

If a school has more than one school ID please indicate this in the last tab called multiple school ID. This can be done easily by:

- Selecting the whole row from the school table that has more than one ID and copy it.
- Click on the bottom tab and move to the multiple school ID tab.
- Click on paste special and then click the paste link button found on the bottom left hand corner of the Paste Special Window.

You should now see the same row on this sheet. Please use this table to indicate the different ID's for this facility. If a board has three ID's for one facility, please show one ID on the school table tab, but add it twice to the multiple school IDs to show the two additional IDs for this facility.

STEP 8

- Please save all of the information and retain a copy of the file.
- Please make another copy of the Data Requirements Form but **remove the first two columns** from the student table (Record number and student home address). This new version will be what is sent to the ministry. **(Removal of the personal information is required in order for both the ministry and school boards to comply with the respective Freedom of Information Acts in the collection and disclosure of information).**
- Please courier a CD copy of the file by August 20, 2003 to:

Drew Nameth
Director, Business Services Branch
Ministry of Education
21st Floor, Mowat Block
Queen's Park
900 Bay Street
Toronto, ON M7A 1L2

Thank you for your cooperation. If you have any questions or problems completing this form, please call:

Sandy Chan at (416) 325-2464 (e-mail: sandy.chan@edu.gov.on.ca)
Grant Osborn at (416) 325-6268 (e-mail: grant.osborn@edu.gov.on.ca)

Appendix A-3

Boards with Data Limitations and Actions Taken

DSB number	DSB_Name	Actions taken
2	Algoma District School Board	Missing student distance records measured by the ministry through postal code information submitted by the board
4	Near North District School Board	Missing student distance records measured by the ministry through address and postal code information submitted by the board
5.1	Keewatin-Patricia District School Board	Board cannot provide home-to-school distance. Ministry measured home to school distance of all students based on postal code data submitted by the board. Measurements were conducted by distributing students to multiple centre points with inputs from Board staff.
12	Toronto District School Board	Missing student distance records for students in a number of secondary schools. Ministry measured distances using postal code information submitted by the board.
22	District School Board of Niagara	Missing student distance records measured by the ministry through address and postal code information submitted by the board
23	Grand Erie District School Board	Missing all non-transported students of the board (<1.6 km for elementary students and <4.8 km for secondary students). Average distances of these non-transported elementary and secondary students were estimated by comparing with the average distances of that live below 1.4 km and 4.8 km for the two panels of the Brant Haldimand Norfolk CDSB that shared the same geography and the Lambton Kent DSB, Bluewater DSB which had similar urban and rural area combination and walk distance policies.
31	Huron-Superior Catholic District School Board	Missing student distance records measured by the ministry through postal code information submitted by the board
33.2	Kenora Catholic District School Board	Board cannot provide home-to-school distance. Ministry measured home to school distance of all students based on postal code data submitted by the board. Measurements were conducted by distributing students to multiple centre points with inputs from Board staff.
51	Brant Haldimand Norfolk Catholic District School Board	Boards' out of boundary students were identified by the ministry through looking up postal code information and the distance of these students were generated by the ministry using postal code information, similar to all other boards.

* Students with HTS distance of over 100 km were recognized at the average HTS distance by board site and by panel, with the appropriate distance weighting applied.

Appendix C

This appendix contains eleven tables, as follows:

“Table C-1: Differences in Student Dispersion”

“Table C-2: Differences in Student Concentration”

“Table C-3: Differences in the Proximity of Other Schools”

“Table C-4: Differences in Traffic”

“Table C-5: Differences in Terrain”

“Table C-6: Differences in Dead End Road Distance”

“Table C-7: Differences in Snowfall”

“Table C-8: Differences in Temperature”

“Table C-9: Details of Composite Adjustment Index, by Board Site”

“Table C-10: Rolling up of Site Composite Adjustment Indices to Board Level”

“Table C-11: Summary of Board Composite Adjustment Index”

Appendix D

This appendix contains twelve tables, as follows:

“Table D-1: Simulated Allocations for General Transportation Needs”

“Table D-2: Simulated Allocations for Mobility Accessible Transportation Needs”

“Table D-3: Simulated Allocations for Special Education Transportation Needs”

“Table D-4: Simulated Allocations for Other Special Transportation Needs”

“Table D-5: Simulated Allocations for Transportation to Provincial Schools”

“Table D-6: Simulated Allocations for Unique Transportation Needs”

“Table D-7: Simulated Allocations for Board and Lodging”

“Table D-8: Simulated Allocations for Safety Programs”

“Table D-9: Simulated Allocations for Local Hazards”

“Table D-10: Simulated Allocations for Local Priorities”

“Table D-11: Simulated Allocations for Administration”

“Table D-12: Simulated Transportation Allocations”
